DETAILED ACTION

This action is responsive to communication filed on March 29, 2006.

Response to Amendment

The examiner has acknowledged the amendment of claims 1, 6, -7, 11, 16-17, 24, 29, 31, 36, 41, and the cancellation of claims 5, 15, 26, 33, 38, and 42.

Response to Arguments

Applicant's arguments with respect to claims 1-4, 6-14, 16-25, 27-32, 34-37, 39-41, and 43-47 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 11-14, 16, 18, 24-25, 27-32, and 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Bonder et al. US Patent 6078265.

Regarding claims 11-13, 16, 24-25, 27, 29-32, and 34 Bonder et al. teaches providing security in a key accessible environment comprising:

Receiving a key in a lock (col. 3 lines 53-54);

Reading a first indicia formed by the keyed cutting of the key blade 19 which is a physical characteristic of the key and reading a second source of indicia provided by a biometric

indicia in the form of a fingerprint (col. 4 lines 28-55). Bonder et al. teaches authorizing the use of the key based on the reading of the first and second source of indicia (col. 4 lines 41-55).

Regarding claim 14, Bonder teaches capturing live fingerprint data (col. 4 lines 5-9).

Regarding claims 20, 28, and 35 Bonder et al. teaches the use of a PIN (col. 5 lines 29-30).

Claim Rejections - 35 USC § 103

Claims 1-3, 36-37, 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent6439996 in view of Bonder et al. US Patent 6078265.

Regarding claims 1-3, 36-37, 39 LeMay et al. teaches the use of a key for providing security to a gaming machine method of providing security in a gaming machine, the method comprising: receiving a mechanical key in a lock within said gaming machine (col. 2 lines 35-46) as illustrated figure 1. LeMay et al. teaches authorizing the use of the key based on the information read from the key (col. 3 lines 9-16) but is silent on teaching reading a first source of information from the lock containing data specific to the lock and reading a second source of information containing data specific to the user. Bonder et al. in an art related security system teaches a key providing a first indicia formed by the keyed cutting of the key blade 19 and providing a biometric indicia in the form of a fingerprint (col. 4 lines 28-55).

Art Unit: 2612

It would have been obvious to one of ordinary skill in the art to read a first source of information from the lock containing data specific to the lock and reading a second source of information containing data specific to the user in the form of biometric information because this improves the security of the lock and key mechanism by using the biometric information to uniquely identify the authorized user.

Claims 4 and 6-8, are rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent6439996 in view of Bonder et al. US Patent 6078265 and further in view of Bradford et al. US patent 6709333.

Regarding claims 4 and 6-8, LeMay et al. teaches reading information from the key which is specific to the user (col. 3 lines 9-16) but is silent on teaching the information specific to the user comprises biometric information. Bradford et al. in an art related identification system teaches the use of biometric information (col. 5 lines 20-25) for uniquely identifying a user and also teaches embedding the biometric identification information in a key (col. 5 lines 36-51) and the biometric information includes fingerprint, facial recognition, and retina scan (col. 5 lines 43-46) in order for the identifying means to be carried and use easily.

It would have been obvious to one of ordinary skill in the art to use biometric information as the user identification information in LeMay because such biometric means would improve the ability to verify the identity of a person.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent6439996 in view of Bonder et al. US Patent 6078265 in view of Bradford et al. US patent 6709333 and further in view of Gokcebay et al. US Patent 6374653.

Art Unit: 2612

Regarding claim 9, LeMay et al. teaches reading information from the key which is specific to the user (col. 3 lines 9-16) but is silent on teaching revoking a previously authorized user ID. Gokcebay et al. in an art related locking mechanism teaches a programmable lock and teaches revoking a previously authorized ID by reprogramming the lock (col. 17 lines 12-19) for changing access to the locking device.

It would have been obvious to one of ordinary skill in the art to revoked a previously authorized user ID in LeMay et al because revoking a previously authorized user ID allows the access list to be updated and ensure that only authorized person have access t the locking mechanism.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent6439996 in view of Bonder et al. US Patent 6078265 and further in view of Gokcebay et al. US Patent 6374653.

Regarding claims 10, LeMay et al. teaches reading information from the key which is specific to the user (col. 3 lines 9-16) but is silent on teaching revoking a previously authorized user ID. Gokcebay et al. in an art related locking mechanism teaches a programmable lock and teaches revoking a previously authorized ID by reprogramming the lock (col. 17 lines 12-19) and further restricting access of the authorized keys (col. 19 lines 36-44) for changing access to the locking device.

Art Unit: 2612

It would have been obvious to one of ordinary skill in the art to revoked a previously authorized user ID in LeMay et al because revoking a previously authorized user ID allows the access list to be updated and ensure that only authorized person have access t the locking mechanism.

Claims 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bonder et al. US Patent 6078265 in view of Bradford et al. US patent 6709333.

Regarding claims 17, Bonder teaches reading a first indicia formed by the keyed cutting of the key blade 19 which is a physical characteristic of the key and reading a second source of indicia provided by a biometric indicia in the form of a fingerprint (col. 4 lines 28-55) but is silent on teaching the biometric comprises at least one of facial recognition, voice recognition, and retinal scan. Bradford et al. in an art related identification system teaches the use of biometric information (col. 5 lines 20-25) for uniquely identifying a user and also teaches embedding the biometric identification information in a key (col. 5 lines 36-51) and the biometric information includes fingerprint, facial recognition, and retina scan (col. 5 lines 43-46) in order for the identifying means to be carried and use easily.

It would have been obvious to one of ordinary skill in the art to use biometric information such as facial recognition of voice recognition as the user identification information in Bonder et al. because these a conventional biometric identification means used in a key fro improving the ability to verify the identity of a person and improve the security of the system.

Art Unit: 2612

Claim 19 and 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bonder et al. US Patent 6078265 in view of Gokcebay et al. US Patent 6374653.

Regarding claims 19 and 21-22, Bonder et al. teaches reading information from the key which is specific to the user (col. 4 lines 28-55) but is silent on teaching revoking a previously authorized user ID. Gokcebay et al. in an art related locking mechanism teaches a programmable lock and teaches revoking a previously authorized ID by reprogramming the lock (col. 17 lines 12-19) for changing access including access time to the locking device.

It would have been obvious to one of ordinary skill in the art to revoked a previously authorized user ID in Bonder et al because revoking a previously authorized user ID allows the access list to be updated and ensure that only authorized person have access t the locking mechanism.

Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bonder et al. US Patent 6078265 in view of LeMay et al. US Patent 6439996.

Regarding claim 23, bonder et al. teaches the use of a key in a security environment (see response to claim 23) and teaches the use of the key in vault and safety boxes (col. 4 lines 1-2) but is silent on teaching the environment comprises a gaming machine. LeMay in an art related lock and key system teaches the use of key and lock a for providing security to a gaming machine (col. 2 lines 35-46).

It would have been obvious to one of ordinary skill in the art to use the security key of Bonder et al. in a gaming machine because Bonder et al. teaches the use of the key in safety

Art Unit: 2612

vault and safety boxes and a key is conventionally used to secure accesses to a gaming machine as evidenced by LeMay.

Claim 40 is rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent 6439996 in view of Bonder et al. US Patent 6078265 and further in view of Bradford et al. US patent 6709333.

Regarding claim 40, LeMay in view of Bonder teaches reading a first indicia formed by the keyed cutting of the key blade 19 which is a physical characteristic of the key and reading a second source of indicia provided by a biometric indicia in the form of a fingerprint (see response to claim 36) but is silent on teaching the biometric comprises at least one of facial recognition, voice recognition, and retinal scan. Bradford et al. in an art related identification system teaches the use of biometric information (col. 5 lines 20-25) for uniquely identifying a user and also teaches embedding the biometric identification information in a key (col. 5 lines 36-51) and the biometric information includes fingerprint, facial recognition, and retina scan (col. 5 lines 43-46) in order for the identifying means to be carried and use easily.

It would have been obvious to one of ordinary skill in the art to use biometric information such as facial recognition of voice recognition as the user identification information in LeMay in view of Bonder et al. because these a conventional biometric identification means used in a key fro improving the ability to verify the identity of a person and improve the security of the system.

Art Unit: 2612

Claims 41, 43-44, and 45-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over LeMay et al. US Patent6439996 in view of Gatto et al. US Patent 6945870 and further in view of Bonder et al. US Patent 6078265.

Regarding claims 41, 43-44 and 45-47, LeMay et al. teaches the use of al key for providing security to a gaming machine method of providing security in a gaming machine, the method comprising: receiving a mechanical key in a lock within said gaming machine (col. 2 lines 35-46) as illustrated figure 1. LeMay et al. teaches authorizing the use of the key based on the information read from the key (col. 3 lines 9-16) but is silent on teaching reading a first source of information from the lock containing data specific to the lock and reading a second source of information containing data specific to the user and gaming machine connected to a computer server. The reference of Gatto et al. teaches gaming machines connected to a computer server 112 as shown in figure 1 and the server also providing a database (col. 11 lines 25-29) in order to provide a secure and modular architecture for monitoring a group of gaming machines but is silent on teaching the second source of information comprises biometric information.

Bonder et al. in an art related security system teaches a key providing a first indicia formed by the keyed cutting of the key blade 19 and providing a biometric indicia in the form of a fingerprint (col. 4 lines 28-55).

It would have been obvious to one of ordinary skill in the art to read a first source of information from the lock containing data specific to the lock and reading a second source of information containing biometric data specific to the user because this improves the security of

Art Unit: 2612

the lock and key mechanism by using the biometric information to uniquely identify the authorized user and the gaming machines connected to a computer provides a secure and modular architecture for monitoring a group of gaming machines

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vernal U. Brown whose telephone number is 571-272-3060. The examiner can normally be reached on 8:30-7:00 Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on 571-272-7308. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov.
